Summary — Backend-specialist SDE with **3+ years** building telecom-scale distributed systems processing **millions of transactions/day** with **zero critical production failures**. Shipped **20+ features at 100% on-time delivery** using Java, Spring Boot, Apache Kafka, and gRPC. Thrives in high-ownership product environments where system design depth and measurable engineering impact are the standard.

Experience

Comviva (Tech Mahindra)

Senior Software Engineer

Gurgaon, Haryana

Dec 2024 – Present

- **Cut production incidents by 40%** by introducing distributed tracing, structured alerting, and a formal RCA process across Java/Kafka microservices — failures previously discovered by clients now caught within minutes internally.
- **Drove 35% throughput increase** on MRTM v7.12.2 (10M+ events/day) by redesigning hot-path microservices, retuning Kafka consumer groups, and eliminating N+1 queries via composite indexes and batch fetching in PostgreSQL.
- **Delivered 20+ features with 100% First-Time-Right and zero missed deadlines** across MRTM v7.12.2 and J4U USSD product lines over 12 consecutive months.
- **Reduced p99 API latency by ~30%** by migrating synchronous inter-service calls to gRPC and introducing CompletableFuture async pipelines via Java Executor Framework.
- **Rebuilt 8 critical PostgreSQL queries** with covering indexes and execution plan analysis, cutting average query time by **60%** and eliminating a recurring slow-query incident class.
- Architected a **multi-tenant SaaS telecom platform** on AWS/GCP with per-tenant config isolation, Consul-backed routing, and Kubernetes auto-scaling — onboarded **3 enterprise clients** with zero downtime migrations.
- Built internal .NET/C# automation tools that **eliminated 8+ hours/week** of manual operational reporting across cross-functional teams.

Software Engineer

Jan 2023 – Dec 2024

- **Reduced customer-facing latency by 25%** across 15+ change requests by refactoring blocking processing chains into async Kafka event flows.
- Owned the **campaign eligibility engine** in MRTM v5.6 and v7.11.1 as sole developer — engine serves **5M+ subscriber checks/day** with sub-50ms p95.
- **Achieved zero-defect go-lives** on all production releases in 2023–2024 by building a JUnit + Mockito regression suite with **85%+ code coverage**.
- Decoupled 4 upstream systems via Kafka async integrations, dropping integration failures from **12/month to near zero**.

Skills

Languages & Core: Java (Core, 8+, Concurrency), Python, C#, SQL, Shell Scripting

Backend & Distributed Systems: Spring Boot, .NET, Microservices, Apache Kafka, Hibernate/JPA, REST APIs, gRPC, Spring Cloud Gateway

Data & Storage: PostgreSQL, MySQL, Oracle, SingleStore, VoltDB, Hazelcast

Infrastructure & Cloud: AWS, GCP, Docker, Kubernetes, CI/CD Pipeline, Linux, SonarQube, Angular

Practices: System Design, OOP, DSA, Agile/Scrum, TDD, JUnit, Mockito, Jira, Confluence

Projects

Mobilytix Real-Time Marketing (MRTM)

2023 – Present

Telecom-grade real-time marketing decisioning platform processing **10M+ subscriber events/day** with sub-100ms offer triggers.

Designed microservices for campaign evaluation, offer prioritization, and eligibility scoring. *Stack:* Java, Spring Boot, Apache Kafka, PostgreSQL, gRPC. **Impact:** 35% throughput uplift; adopted by 3 enterprise telecom clients.

Centralized Unified Integration Gateway (CUIG)

2023 – 2024

Config-driven gateway unifying HTTP and Kafka integrations across 6 telecom platforms. Dynamic routing via Consul; PostgreSQL for audit and config persistence. *Stack:* Java, Spring Boot, Apache Kafka, PostgreSQL, REST APIs, Consul. **Impact:** 40% reduction in deployment effort; onboarding cut from 2 weeks to 3 days.

Education

Maharaja Surajmal Institute of Technology

B.Tech in Computer Science

2019 – 2023

CGPA: 8.8/10.0 — New Delhi

Achievements

- **Top Performer, FY 2024–25** at Comviva — recognised among top 5% of engineers company-wide for delivery excellence, technical ownership, and zero production-failure track record.
- **CodeChef 4-Star** | Peak rating **1925** — top 8% globally; demonstrates strong DSA foundation critical for product-company interview rounds.
